DETAILED ACTION

Information Disclosure Statement

1. The information disclosure statement filed reference listed in the information Disclosure Submitted on 010/30/07 have been considered by the examiner (see attached PTO-1449

Allowable Subject Matter

2. Claims 16-42, are allowed.

The following is an examiner's statement of reasons for allowance:

Regarding **claims 16, 23, 30, 33, 35, 39**, the present application teaches a method of supporting roaming service having an authentication server and plurality of access points (APs) connected to the authentication server wherein deriving from a known master key a first-level security key to be shared between a station (STA) and an AP with which the STA attempts to roam and deriving from the firs-level security key a second-level security to be shared between the STA and the neighbor AP, the neighbor AP pre-authenticates the STA with the second level security level as specifically mentioned on claims 16, 23, 30, 33, 35, 39.

The closest such as Mejer et al. (US Publication 2004/0103282 A1) teaches a method and system for handling roaming mobile nodes in a wireless network. The system uses a Subnet Context Manager to store current Network session keys, security policy

Application/Control Number: 10/752,675

Art Unit: 2617

and duration of the session (e.g. session timeout) for mobile nodes, which is established when the mobile node is initially authenticated. Pairwise transit keys are derived from the network session key. The Subnet Context Manager handles subsequent re-association requests. When a mobile node roams to a new access point, the access point obtains the network session key from the Subnet Context Manager and validates the mobile node by computing a new pairwise transient key from the network session key. Mejer fails to teach a method of supporting roaming service having an authentication server and plurality of access points (APs) connected to the authentication server, wherein deriving from a known master key a first-level security key to be shared between a station (STA) and an AP with which the STA attempts to roam and deriving from the firs-level security key a second-level security to be shared between the STA and the neighbor AP, the neighbor AP pre-authenticates the STA with the second level security level as specifically mentioned on claims 16, 23, 30, 33, 35, 39.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
